Econ 201A: Problem Set III Due on October 26, 2012 1. Revealed Preference and Utility. Suppose that the optimal consumption vector for Alice is  $x \in \mathbb{R}^2_+$  when the price is  $p \in \mathbb{R}^2_{++}$  and  $x_0$  when the price is  $p_0$  Alice is maximizing her utility  $u : \mathbb{R}^2_+ \rightarrow \mathbb{R}$ . Answer the following questions. (a) Show  $u(x) \geq u(x_0)$  if  $x$  is revealed preferred ( $p \cdot x_0 \leq p \cdot x$ ).

(iii)  $u$  is strictly monotone: If  $x > y$  (that is  $x_i > y_i$  for all  $i \in S$ ) then  $u(x) > u(y)$ . (ii)  $x \succsim y$  if and only if  $x_i \geq y_i$  for all  $i \in S$  with at least one preference strict. – Note that a feasible allocation  $x$  is Pareto efficient if and only if it is not blocked by  $S = I$ .

The grading will be based on five problem sets (40%) and a final exam (60%). In each problem set, there will be one problem that is to be graded, and several other problems that are not for a grade. I encourage you to work on the problem sets together, but you need to write your solution to the problem for a grade by yourself.
