There are still 98,000 installations of  
SQL Server 2008 and 2008 R2 that  
are no longer being supported by  
Microsoft, and need to be upgraded.  
And 2012 and 2014 are in extended  
support, so there are lots of reasons  
to look at the options for upgrading  
your SQL Server, and not much time  
to do it.

The version of SQL Server will impact the number of partitions you can have at a given time. Originally only 1,000 partitions were allowed in a partitioned object. As of SQL Server 2008 SP2 / SQL Server 2008 R2 SP1 and higher versions, there is support for 15,000 partitions per object, but it needs to be enabled.

The server tech is natively built from the ground up to offer scale and distribution - you can run a single MongoDB cluster on all three major cloud providers if you want. You can even run it on your laptop or in your own data center, building you a much better ramp from the data center to the cloud.
