Count the number of tallies for each event. The number of each event occurring will be very close to 50. (For example, 45 heads and 55 tails) If the numbers of heads and tails are NOT close to 50%, toss the quarter 50 more times. The more you toss the quarter, the more likely you are to have an even distribution.

Probability refers to the likelihood that a certain event will happen. Probability of any event occurring lies in the range of between 0 and 1. If there is no way a certain event is likely to occur, then its probability equals zero. If one is sure that a certain event must happen, then its probability equals to one.
