Soft starter SCR fault. SCR's are limited to a maximum current rating, as well as a maximum voltage rating. In addition, the number of starts per hour is also limited. A combination of voltage spikes, too many starts per hour, or too much current during a start will destroy a soft starter. Phase imbalance for either voltage or current will cause an SCR to fail, as will a single phase condition on a 3-phase

soft starter determines when the motor is up to speed and at that time, transitions from silicon-controlled rectifier (SCR) control to the bypass contactor. Rockwell Automation offers the SMC -3 and the SMC-Flex that are both hybrid soft starters, meaning they have the power structure of a solid-state starter and an internal bypass contactor.
